

CONTENTS

CHAPTER 1. INTRODUCTION	1
1-1 Notation	1
1-2 Instruction set and execution time model	5
CHAPTER 2. BASICS	11
2-1 Manipulating rightmost bits	11
2-2 Addition combined with logical operations	15
2-3 Inequalities among logical and arithmetic expressions	17
2-4 Absolute value	18
2-5 Sign extension	18
2-6 Shift right signed from unsigned	19
2-7 Sign function	19
2-8 Three-valued compare	20
2-9 Transfer of sign	21
2-10 Decoding a “zero means 2^{*n} ” field	21
2-11 Comparison predicates	21
2-12 Overflow detection	26
2-13 Condition code result of add, subtract, and multiply	33
2-14 Rotate shifts	35
2-15 Double-length add/subtract	35
2-16 Double-length shifts	35
2-17 Multibyte add, subtract, absolute value	37
2-18 Doz, max, min	38
2-19 Exchanging registers	39
2-20 Alternating among two or more values	42
CHAPTER 3. POWER-OF-2 BOUNDARIES	47
3-1 Rounding up/down to a multiple of a known power of 2	47
3-2 Rounding up/down to the next power of 2	48
3-3 Detecting a power-of-2 boundary crossing	51
CHAPTER 4. ARITHMETIC BOUNDS	53
4-1 Checking bounds of integers	53

4-2	Propagating bounds through adds and subtracts	56
4-3	Propagating bounds through logical operations	60
4-4	Signed bounds	65
CHAPTER 5. COUNTING BITS		67
5-1	Counting 1-bits	67
5-2	Parity	76
5-3	Counting leading zeros	78
5-4	Counting trailing zeros	86
CHAPTER 6. SEARCHING WORDS		93
6-1	Find first 0-byte	93
6-2	Find first string of 1-bits of a given length	99
CHAPTER 7. REARRANGING BITS AND BYTES		103
7-1	Reversing bits and bytes	103
7-2	Shuffling bits	108
7-3	Transposing a bit matrix	110
7-4	Compress, or generalized extract	118
7-5	General permutations, sheep and goats operation	124
7-6	Rearrangements and index transformations	128
CHAPTER 8. MULTIPLICATION		131
8-1	Multiword multiplication	131
8-2	High-order half of 64-bit product	134
8-3	High-order product signed from/to unsigned	134
8-4	Multiplication by constants	135
CHAPTER 9. INTEGER DIVISION		139
9-1	Preliminaries	139
9-2	Multiword division	142
9-3	Unsigned short division from signed division	147
9-4	Unsigned long division	150
CHAPTER 10. INTEGER DIVISION BY CONSTANTS		157
10-1	Signed division by a known power of 2	157
10-2	Signed remainder from division by a known power of 2	158

10-3	Signed division and remainder by non-powers of 2	159
10-4	Signed division by divisors ≥ 2	162
10-5	Signed division by divisors ≤ -2	170
10-6	Incorporation into a compiler	173
10-7	Miscellaneous topics	175
10-8	Unsigned division	180
10-9	Unsigned division by divisors ≥ 1	182
10-10	Incorporation into a compiler (unsigned)	185
10-11	Miscellaneous topics (unsigned).	186
10-12	Applicability to modulus and floor division	189
10-13	Similar methods	190
10-14	Sample Magic Numbers	192
10-15	Exact division by constants	193
10-16	Test for zero remainder after division by a constant	200
CHAPTER 11. SOME ELEMENTARY FUNCTIONS		205
11-1	Integer square root	205
11-2	Integer cube root	214
11-3	Integer exponentiation.	215
11-4	Integer logarithm	218
CHAPTER 12. UNUSUAL BASES FOR NUMBER SYSTEMS		225
12-1	Base -2	225
12-2	Base $-1 + i$	232
12-3	Other bases	235
12-4	What is the most efficient base?	235
CHAPTER 13. GRAY CODE		237
13-1	Gray code	237
13-2	Incrementing a Gray coded integer	239
13-3	Negabinary Gray code	241
13-4	Brief history and applications	241
CHAPTER 14. HILBERT'S CURVE		243
14-1	A recursive algorithm for generating the Hilbert curve	244
14-2	Coordinates from distance along the Hilbert curve	248
14-3	Distance from coordinates on the Hilbert curve	255
14-4	Incrementing the coordinates on the Hilbert curve	257
14-5	Non-recursive generating algorithms	259

14-6	Other space-filling curves	259
14-7	Applications	261
CHAPTER 15. FLOATING-POINT		263
15-1	IEEE format	263
15-2	Comparing floating-point numbers using integer operations	265
15-3	The distribution of leading digits	266
15-4	Table of miscellaneous values	269
CHAPTER 16. FORMULAS FOR PRIMES		273
16-1	Introduction	273
16-2	Willans's formulas	275
16-3	Wormell's formula	279
16-4	Formulas for other difficult functions	280
APPENDIX A. ARITHMETIC TABLES FOR A FOUR-BIT MACHINE		287
APPENDIX B. NEWTON'S METHOD		291
REFERENCES		293
